TECHINICAL DATA SHEET

Product Name	Calcium Acetate Magnesium Salt	
Synonyms	Snow-melting CMA	
CAS No.	76123-46-1	
Molecular Formula		
Molecular Weight		
Packing	25kg or big bags	
Quantity	25MT/20'FCL	
Specification	<p>Appearance: Off-White or light yellow spherical granule Purity: 96% min Calcium: Magnesium Molar Ratio 4:6 PH (10% aqueous solution): 8-10 Bulk Density: 650kg/m³-780 kg/m³ Water insoluble material: 4.0% max Size of granule: 1-4.5 mm</p>	
Application	<p>Dry spread : Spreading the snow-melting into snow ground by man or machine directly . The reference to the amount of spreading is 30-50g/m² below 50mm. It should increase the amount of spreading or times in the case of above 50mm or low temperature .</p> <p>Spray solution: lease compound snow-melting to the reference of 20% concentration aqueous solution and spray on the snowfield. When the snow is below 50mm , the reference amount of spraying is 0.4L/M² ,in the case of above 50mm or low temperature ,please increase the amounts of spraying or times .</p> <p>Applied before or early snow is the best way to melt. It can prevent freezing of the snow, which is difficult to eliminate.</p>
